

OneStep is looking for a Full Stack Engineer

OneStep is pioneering modern physical therapy - designed for the patient, focused on measurable outcomes and convenient for your everyday life. We are a fast-growing, well-funded startup company with the goal of using technology to help people get better, feel healthier, and improve their lives.

Powered by smartphone sensors, OneStep's main offering is to allow patients to measure their improvement, provide actionable feedback, build tailor-made recovery plans and enable 24/7 access to care - all from their smartphone. We've had hundreds of users download the app who use it to get better and improve their health outcomes - and now we're ready to bring it to thousands more!

About this Role:

- You will be responsible for the product that manages and controls all therapist-facing aspects of OneStep, including:
 - Depict the full status of a patient in a friendly interface.
 - Enable to build and distribute a fully-customized recovery plan from building blocks.
 - Manage many therapists <-> many patients relationships.
 - Manage in-house therapists, small clinics and large providers, medical device partners and other health organizations.
 - Comply with HIPAA, GDPR and other privacy / cybersecurity standards
 - Running on various environments: web, mobile (iOS and Android).
- You will report directly to the CTO, and potentially manage the growing web team that is responsible for owning the therapist side of OneStep.
- You will work closely with the product division, specifically with a UX/UI designer, and have the opportunity to shape the product strategy.
- You will work with the customer success, medical division and with clients inside and outside the organization.
- You will have a key position in the growing development division, and influence the technological stack, architecture, culture and methodologies
- You will work with a wide range of technologies and have the opportunity to learn on a daily basis

one step

We are looking for:

- Strong sense of responsibility and willingness to do good
- Ability & willingness to learn and work with new frameworks and technologies
- Effective team members, good communication skills, ability to influence others and fun to work with.
- Experience in React.
- Experience in Backend web development, preferably Python/Flask.
- Experience with Databases.
- Deep knowledge in software architecture design and REST API.
- Experience with Testing Frameworks.
- (nice to have) Experience in developing consumer facing products
